Use-Case Specification: Manage Account

1. Use-Case Name: Manage Account

1.1 Brief Description

This use-case allows a user to manage their account details, such as updating profile information, changing passwords, and managing privacy settings.

2. Flow of Events

2.1 Basic Flow

1. User selects the option to manage their account.
2. System displays the account management page with options to update profile, change password, and manage privacy settings.
3. User selects an option (e.g., update profile).
4. User enters the new information (e.g., name, email).
5. System validates the entered information.
6. If the information is valid, the system updates the user's account details.
7. System displays a confirmation message that the account details have been updated successfully.
8. System redirects users to the management page.

2.2 Alternative Flows

2.2.1 *Duplicate email*

1. System displays an error message indicating the invalid information.
2. User corrects the information and retries.

2.2.2 *User decides to cancel the changes*

1. User selects the option to cancel.
2. System discards the changes and returns to the account management page.

3. Special Requirements

- User authentication and authorization are required to manage account details.

4. Preconditions

- User is logged into the application.

5. Postconditions

- The user's account details are updated.

6. Extension Points

None
